

APIcom Software

APICOM is an easy-to-use yet powerful interface program that connects remotely to TAPI's main line of ambient and stack-gas instrument for system and data control.

- Link from a remote location to a TAPI instrument via modem, direct RS-232 cable or Ethernet.
- View the instrument front panel and remotely access all functions that could be accessed when standing in front of the instrument
- Remotely edit system parameters and set points.
- View, graph, save and download data.
- View, retrieve, edit, save and upload data acquisition scripts or calibrator sequence scripts.
- Check on system parameters for trouble-shooting or quality control.

Minimum System Requirements

- 32-bit Microsoft Windows™ operating systems (95, 98, ME, NT 4.0, 2000, XP, Windows 7)
- 4-20MB of RAM memory
- Service Pack 4 or higher on Windows NT 4.0
- Internet Explorer 5.0 or higher strongly recommended
- 4MB disk space for installation, more for scripts and sample files
- Available RS-232 serial port, modem or Ethernet connection to connect to an instrument
- Some new DAS functionality may require updated instrument firmware
